

GET AN EARLY ACCESS

TRAININGMATE

TrainingMate maximises the efficacy of VBS3 in your battle lab training environments

EAP TrainingMate's Early Access Program

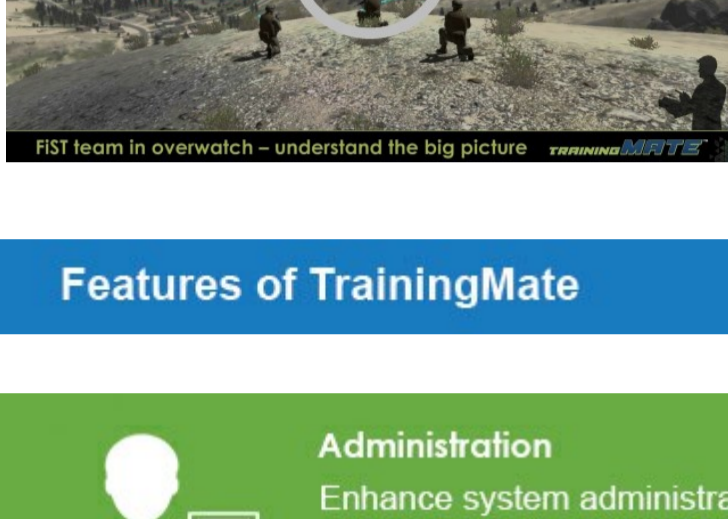

Our Early Access Program allows organisations developing VBS based training systems to trial a pre-release version of TrainingMate for free, to evaluate features, provide feedback and potentially influence product development

Your involvement

As an Early Access Program participant, in addition to being the first to enjoy exclusive access to our application, you will also be able to work closely with our Team to provide feedback on product design, user experience, critical issues and suggestions for improvement. The feedback you provide will help us to make TrainingMate even better.

Benefits

The benefit of this direct engagement is it will provide you with direct access to SimCentric and the opportunity to influence the content and direction of our TrainingMate product and confirm in advance if it will meet requirements you might have on future projects/deliveries.

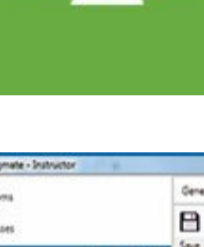

FIST team in overwatch – understand the big picture *trainingmate*

Monitor, Conduct and Instruct your VBS3 based battle lab training sessions with TrainingMate
